Resilience AI

Resilience AI

Building Resilience
at every step

www.resilience360.ai

Risk Management, that is based on Unverified geospatial analytics, Missing built-environment intelligence, Multiple standards and Statistical models are conventional drills. This drill doesn't provide **Access, Accuracy, Actionability** for business and government to prepare its people, assets, business for disaster and environment impact.

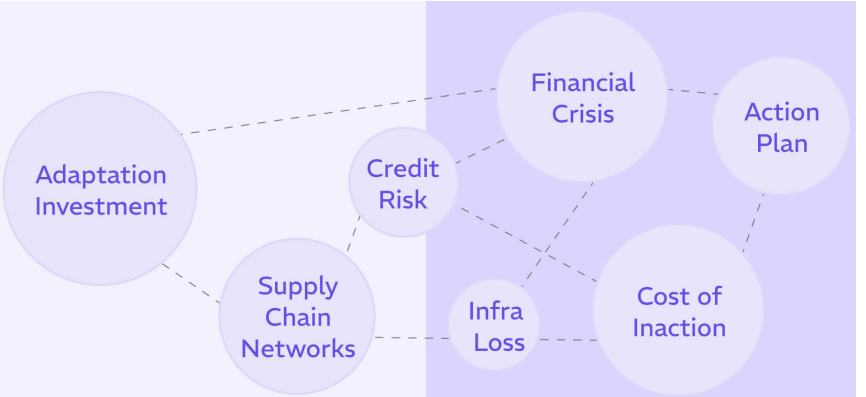
Resilience360 is the **first enterprise software** that upstreams disaster and environment risk for both business and governments as a Life Cycle Management (LCM) and not in silos.

Resilience AI is mainstreaming **Risk to Resilience,** beginning with Cyclone Yaas, a setback for People, Planet, Profit.

Our Vision is Building Resilience at every step.

The Mission is to provide low-cost, science-based, factually-accurate, high-impact technology to prepare 60% unaccounted buildings and business.

Why Resilience360?



Private Sector

<2% private sector in adaptation finance

70% Fortune companies experience **supply chain disruption**

>90% CROs view climate change as top emerging risk

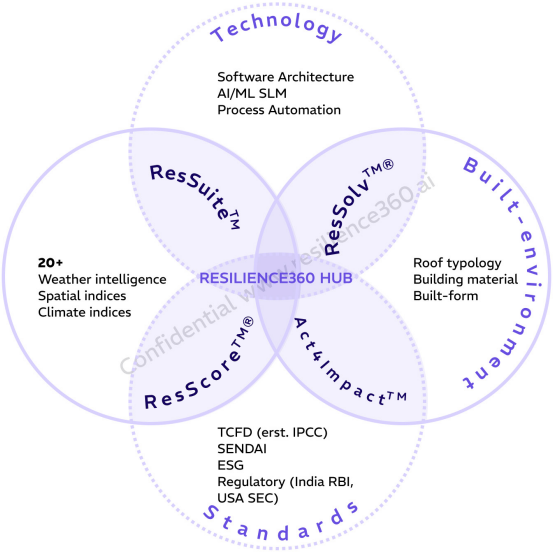
USD 30 trillion per year as Cost of Inaction is equivalent to GDP of United States

<30% ULBs **plan to act on EWS** and weather forecasts

Built Environment losses is **~70%** of the total losses

Public Sector

What is Resilience360?



- Verified building risk record at >90% accuracy; any format, anywhere.
- Risk exposure intel in 8 hours per asset; run it for large volume.
- Single-window, multi-standard business preparedness test.
- Compliance with root-cause analysis.
- 9-18 days to automate your workflow with API.
- 4-8 months to digitize disaster risk management with Software

Enterprise Risk Life Cycle Management using Resilience360 suite of products

MEASURE

Baseline Risk exposure for Buildings to Business
(built-environment and company/ city baseline)

COMPLY

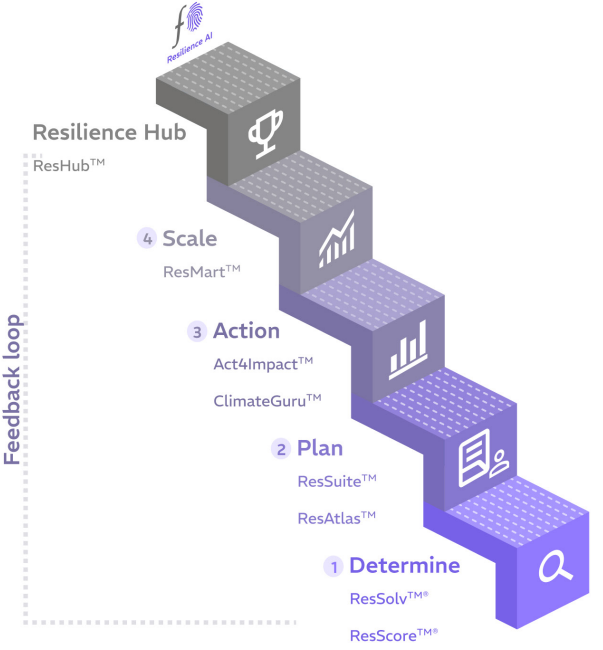
Diagnose and Analyse root cause of Risk
(insights, report)

MONITOR

Reduce Risk with controls and compliance
(people, asset, business)

MANAGE

Digitized Mitigation Action
(action, multiply)



ResSolv™

ResSolv is a climate-risk determination module, which uses three decades of roof-top architecture, built environment, artifical intelligence (AI) and Machine Learning based classification.

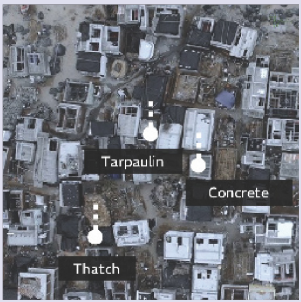
20+
Factors applied using Machine Learning

25+
Realtime climate events

720k+
Verified building

>90%
Confidence

<8 hr
Run-Time

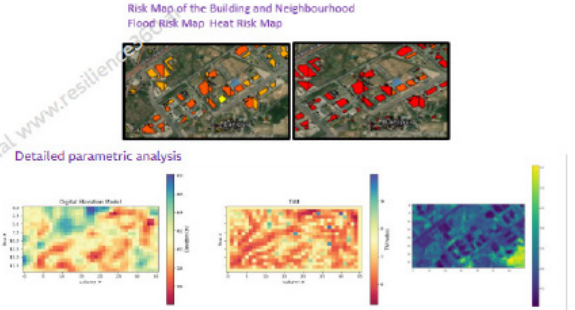


Every roof is a unique fingerprint ...

... which translates to every building's unique climate risk profile

ResSuite™

ResSuite™, is a Generative AI based report of analytics, which covers climate risk diagnosis (root cause analysis), biodiversity atlas, value at risk, composite vulnerability index.



ResScore™

INNOVATE CITIES 2024

ResScore™ is an index, which evaluates climate resilience, covering both sustainability and climate related risks based on 6 pillars

Institutionalized baseline assessment for companies intersecting across standards and frameworks

ESG

SENDAI FRAMEWORK FOR DISASTER RISK REDUCTION 2015-2030

IPCC

Digitised for ease of adoption

Using hyperlocal database, it acts as a starting point to assess climate preparedness at an organization level with insights from 55+ vulnerability parameters

CASE STUDY 01

USBRL

The Konkan Railway Corporation Limited (KRCL) and Resilience AI worked together to draft a disaster risk report for the Udhampur-Srinagar-Baramulla Railway Link (USBRL), a railway line of national importance that is built in a geographically challenging region.

OPPORTUNITY The USBRL is a vital transportation link in J&K and faces constant threats from natural disasters, posing significant risk to the railway line's infrastructure, stations, and surrounding communities.

SOLUTION Our AI-enabled tool, ResSolv, was run to utilize high-resolution satellite imagery, meteorological data, & other relevant parameters to assess vulnerabilities within a 1 km buffer zone around each of the railway stations.

IMPACT

1. Prioritized Risk Mitigation
2. Infrastructure Protection
3. Data-driven Decision Making

2 years	**13.5 hours**
360° climate planning timespan	Projected runtime from pilot order initiation

" The ResSolv AI model empowers organizations to understand and proactively address potential risks, thereby enhancing the operational reliability of the USBRL in particular and the Indian Railways in general. " Konkan Railway Corporation Limited

CASE STUDY 02

Vivekananda Camp

The Chintan Environmental Research and Action Group worked closely with Resilience AI to deploy innovative solutions at the climate-health nexus, particularly in implementing AI models for assessing heatwave impacts on vulnerable communities in Vivekanand Camp, Delhi.

OPPORTUNITY Hyper-local heat disparity. Low-income, highly dense areas such as Vivekanand Camp are up to 6° C hotter than the rest of the city.

SOLUTION AI for Extreme Weather - Resilience used the AI-generated maps to find high-risk homes, prioritize outreach for early warning and preparation, and demonstrate the significance of heat risks to locals.

IMPACT Once at-risk households were identified, the team began outreach to prepare for the upcoming heatwave and implement solutions. Cool roof prototypes were fabricated and tested, with one model resulting in 12°C lower indoor temperatures.

3 years	**5 hours**
Product development timespan	Projected runtime from pilot order initiation

" It is true that the repercussions for heatwaves are long felt and there is pressing need for AI tools such as ResSolv to help understand the hyperlocal risks of communities. "

Bharti Chaturvedi

Director, Chintan Environmental Research and Action Group

" BSDMA is the first SDMA to leverage an AI-based tool as part of a CDMP for the assessment of socio-economic vulnerability & risk at a hyper-local, building level. "

Bihar State Disaster Management Authority

CASE STUDY 03

Gaya CDMP

Resilience AI was engaged by the Bihar State Disaster Management Authority (BSDMA) to contribute to the City Disaster Management Plans (CDMP) for Gaya, an important tourist city in Bihar.

OPPORTUNITY Traditional disaster response mechanisms lack precision in identifying hyper-local risk zones, leading to generic alerts and inefficient evacuation plans. This results in longer recovery times and greater disruptions.

SOLUTION Resilience AI team worked with BSDMA to leverage ResSolv in the preparation of the Gaya City Disaster Management Plan. Advantages include enhanced Early Warning Systems (EWS) and optimized resource allocation, evacuation & recovery planning.

IMPACT The focal point of this output was the creation of a modern-day CDMP that works t reduce disaster risks at a household level, through a synergistic integration of advanced technologies and community-centric approaches.

2 years	**48 hours**
360° climate planning timespan	Projected runtime from pilot order initiation

Founders Story

Resilience AI was officially incorporated in November 2023.

Samhita is from the northeastern belt of India, which experiences significant loss of assets and livelihood every year due to floods. “While nature may be seasonally unkind, resilience doesn’t need to be seasonal. Climate resilience should be a 365-day conversation.” She co-founded Resilience AI with the aim of building climate resilience with technology.

Sundeep is a 5th generation farmer. Agriculture faces inevitable losses due to climate change. Over 18 years he has set up Climate and ESG business units and Data science centre of excellence to give future generations a fighting chance with nextGen climate solutions

Dr. Anshu and Dr. Manu are urban planners serving dignity in disaster globally for 30 years. They have been awarded the United Nation Sasakawa Award and the Subhas Chandra Bose Aapda Prabandhan Puraskar by the Government of India for building resilience in communities exposed to disasters and climate change impact.

Together, we aim to provide goverments, climate agencies and private corporations with credible and co-owned intelligence to build their resilience to climate-induced events.
